Summary

Backend and AI Engineer with full-stack experience building REST APIs, ML services, and asynchronous applications using **Python, FastAPI, PostgreSQL, Redis, and React**. Electrical Engineering student with a strong foundation in **DBMS, OOP, and system design**, focused on developing data-driven applications.

Skills

- **Languages:** Python, Java, JavaScript, SQL
- **Backend:** FastAPI, REST APIs, SQLAlchemy, JWT Authentication, Redis, Celery
- **Databases:** PostgreSQL
- **AI/ML:** Scikit-learn, Feature Engineering, Model Deployment, SHAP, LLM APIs, Prompt Engineering, Function Calling
- **Frontend:** React, HTML, CSS
- **CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Programming, DBMS
- **Tools & Problem Solving:** Git, Docker, Postman, Redis CLI | Solved 100+ LeetCode problems (Arrays, Strings, Linked Lists, Binary Search, Recursion)

Work Experience

Software Development Intern | *Scope For Change*

May 2026 – June 2026

- Develop and maintain responsive website features, optimizing user experience and updating critical content.
- Engineer robust donation and volunteer registration pages to support seamless user onboarding and engagement.
- Collaborate with cross-functional design teams to implement fundamental SEO strategies and website performance optimizations.

Projects

Insurance Prediction System (Full Stack + ML)

GitHub | Live | API

- Built and deployed a full-stack insurance prediction application using **FastAPI, PostgreSQL, Docker, and JavaScript**, supporting authentication, prediction workflows, and admin reporting.
- Reduced model MAE from 4213 to 3941 (~6.5%) using **log transformation and outlier analysis** on skewed insurance cost data.
- Developed **REST APIs** for registration/login, model inference, prediction storage, and admin analytics with paginated user and prediction history.
- Implemented **SHAP** for explainable ML predictions and secured the application using **Argon2, HTTP-only JWT cookies, role-based authorization, Pydantic validation, CSP headers, and rate limiting**.
- Designed a **PostgreSQL database** using **SQLAlchemy ORM** for user accounts and insurance records, with admin monitoring of user activity and prediction trends.

SmartLink Analytics Platform (Full Stack)

GitHub

- Developed a full-stack URL analytics platform using **FastAPI, React, PostgreSQL, Redis, Celery, and REST APIs**.
- Implemented **JWT authentication** with user signup, login, protected APIs, and secure access control.
- Built URL shortening and redirection with custom alias generation, validation, and **Redis caching** to significantly reduce URL retrieval latency.
- Designed an analytics dashboard for **clicks, unique visitors, device usage, geographic insights, and date-wise traffic**, using visitor IDs and user-agent/IP-based tracking.
- Integrated **Celery background workers with Redis** to process click analytics asynchronously and added an **LLM-powered feature** for automated traffic insights and engagement summaries.

Education

Jamia Millia Islamia

B.Tech in Electrical Engineering

Expected 2027

New Delhi, India
